Description

If seems there is something wrong with either the build-flow or a command in the scc project.

Started by upstream project "scc-master-toolkit-omnirob-nightly" build number 1
originally caused by:
 Started by build flow distribution-buildflow.omnirob-nightly#1
Building in workspace
 /homes/flier/Projects/Ongoing/CITK/distinstaller/jenkins/jobs/scc-master-toolkit-omnirob-nightly/workspace/label/master
Wiping out workspace first.
Cloning the remote Git repository
Cloning repository git://gitorious.org/qt-labs/scxml.git
 > git init /homes/flier/Projects/Ongoing/CITK/distinstaller/jenkins/jobs/scc-master-toolkit-omnirob-nightly/workspace/label/master
Fetching upstream changes from git://gitorious.org/qt-labs/scxml.git

cp: cannot create regular file `/tmp/omnirob/omnirob-nightly//bin': No such file or directory
Build step 'Execute shell' marked build as failure
Finished: FAILURE

History

#1 - 2014-05-09 11:45 - Florian Lier

- Status changed from New to Feedback

#2 - 2014-05-09 12:45 - Jan Moringen

- Description updated

- Category set to Recipe

Is this job generated from Johannes' omnirob distribution? If so, it inherited a problem from the FAMULA distribution: the prefix directory is not created correctly in the distribution-prepare job.

Your commit addresses the symptom, not the root cause. The problem has to be fixed in the respective distribution descriptions.

#3 - 2014-05-09 13:21 - Johannes Wienke

In any case, it should be solved with the recent commit. I think this can be closed.

#4 - 2014-05-09 13:24 - Florian Lier

- Status changed from Feedback to Closed
