<b>Description</b>			
<p>Having the following defined in a distribution file, I'd expect to get everything installed into /vol/famula/nightly. But it goes to /vol/famula/lsp-famula-nightly. So the <code>#{variant}</code> variable doesn't refer to the define variable! This is not intuitive at all!</p> <p>Please also use a better name than "bla-name". What does this refer to?</p> <pre>"name": "lsp-famula-nightly", "variables": {   "bla-name": "\${distribution-name}",   "variant": "nightly",   "toolkit.volume": "/vol/famula",   "toolkit.dir": "\${toolkit.volume}/\${variant}",</pre>
