

Finite State Machine Based Testing - Task #393

better documentation of stdoutobserver

2015-03-05 12:50 - Christian Heigele

Status:	Closed	Start date:	2015-03-05
Priority:	Normal	Due date:	
Assignee:	Florian Lier	% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:	0.18	Spent time:	0.00 hour
Description			
Just state in the documentation, that the observers are not allowed to be killed within the first timeout. (Maybe the iniparser could check if two stdout-observers have the same timeout? This would make any sense in the current implementation)
